

Brandon Salinas

Memorial Scholarship

This Memorial Scholarship is in memory of Brandon Salinas. He was blessed to have been a part of the first class to walk the halls of KCAL and a 2017 Keller High School Distinguished graduate. While at Keller, he loved the engineering tours at Lockheed Martin. He had a love of robotics and engineering that lead him to aerospace engineering at UT Arlington. Once asked what got him interested in aerospace engineering, he replied that it was the computer games he played growing up! He liked learning how the planes worked so he could win.

In 2016, his robotics team 8181A made it to the VEX Robotics Competition with the help of his precise robotics journal he was in charge of for the team. The team of Grant Hodges, Vincent Demma, Bradley Mann, Connor Schee, and Brandon Salinas brought home the Design Award for 2015-2016.

Brandon had a love of family and friends. He had the biggest heart, kindest soul and extremely thoughtful, he was protective of the ones he loved and always made you smile. If you were one he treasured, he never hesitated in wrapping his arm around your shoulders or around your neck depending on your height. He was always there for you in a heartbeat to help with anything.
